VitalSource is the leading provider of online textbooks and course materials. Over 15 million users have used our Bookshelf platform over the past year to improve their learning experience and results. With anytime, anywhere access and built-in tools like highlighters, flashcards, and study groups, it's easy to see why so many students go digital with Bookshelf. Engineering Fundamentals: An introduction to engineering textbooks | Buy textbooks | Architecture, engineering, manufacturing and transport textbooks | Introductory/General Engineering Textbooks Summary Author bio Table of Contents Digital Rights Now in Dynamic Full Color, ENGINEERING FUNDAMENTALS: AN INTRODUCTION TO ENGINEERING, 5th helps readers develop the strong problem-solving skills and solid foundation in fundamental principles they need to be analytical, detail-oriented, and creative engineers. The book opens with an overview of what engineers do, a look at the different specialization areas and a simple look at what it takes to succeed. The book then covers the basic physical concepts and laws that you will meet on the job. Professional profiles in the text emphasize the work of practicing engineers from all over the world, tying in the fundamental principles and applying them to professional engineering. Using a flexible modular format, the book shows how engineers apply physical and chemical laws and principles, as well as mathematics, to design, test and guide the production of millions of parts, products and services that people use every day. Now in dynamic full color, Engineering Fundamentals: An Introduction to Engineering, 5th (SI edition) by Saeed Maoverii helps students and readers develop the strong problem-solving skills and solid foundation in fundamental principles they need to become detail-oriented, analytical and creative engineers. The PDF ebook opens with an overview of what engineers do, a look at the different specialization areas and a simple look at what it takes to succeed. The ebook than the basic physical concepts and laws you will encounter on the job. Professional profiles in the textbook highlight the work of practicing engineers from all over the link the fundamental principles and apply them to professional engineering. Using a flexible modular format, the ebook shows how engineers apply chemical and physical laws and principles, as well as mathematics, to test, design and guide the production of millions of products, components and services that people use every day. PS we also have Engineering Fundamentals: An introduction to engineering, 5th test bench, instructor manual and other resources for sale. Get in touch for more info. Only logged-in customers who have purchased this product can leave a review. Foreword. Employees. 1. Mathematical and physical units, standards and tables (Jack H. Westbrook). 1. Symbols and abbreviations. 2. Mathematical table. 3. Statistical table. 4. Units and Standard. 5. Tables of conversion factors. 6. Standard sizes. 7. Standard screws. 2. Mathematics (J. N. Reddy). 1. Arithmetic. 2. Algebra. 3. Set Algebra. 4. Statistics and probability. 5. Geometry. 6. Trigonometry. 7. Flat analytical geometry. 8. Fixed analytical geometry. 9. Differential Calculus. 10. Integral Calculus. 11. Differential equations. 12. Finite element method. 13. Laplace Transformation. 14. Complex analysis. 15. Vector analysis. Bibliography. 3. Mechanics of rigid bodies (Wallace Fowler). 1. Definitions. 2. Statics. 3. Kinematics. 4. Kinetics. 5. Friction. Bibliography. 4. Selection of metals for structural design (Matthew J. Donachie). 1. Introduction. 2. Common alloy systems. 3. What are alloys and what influences their use? 4. What are the properties of alloys and how are alloys strengthened? 5. Manufacture of alloy articles. 6. Alloy information. 7. Metals at lower temperatures. 8. Metals at high temperatures. 9. Melting and casting practices. 10. Blacksmiths, shapes, powder metallurgy, and joining alloys. 11. Surface protection of materials. 12. Post-Service Renovation and Repair. 13. Alloy selection: A look at possibilities. 14. Level of ownership data. 15. Thoughts on alloy systems. 16. selected sources of information for alloy. Bibliography. 5. Plastics: Information and properties of polymeric materials (Edward N. Peters). 1. Introduction. 2. Polyolefinic Thermoplastics. 3. Side-Chain-Substituted Vinyl Thermoplastics. 4. Polyurethane and cellulose resins. 5. Engineering Thermoplastics: Condensation Polymers. 6. High-quality materials. 7. Fluorinated thermoplastics. 8. Thermosets. 9. Elastomers for general use. 10. Special Elastomers. References. 6. Overview of ceramic materials, design and application (R. Nathan Katz). 1. Introduction. 2. Processing of advanced ceramics. 3. Brittleness and Brittle material design. 4. 5. Resources. 6. Future trends. References. 7. Mechanics of deformable bodies (Neal F. Enke and Bela I. Sandor). 1. Introduction to stress and tension. 2. Beams and bends. 3. and Shafts. 4. Plates, shells and contact stresses. 5. Non-linear reaction of materials. 6. Energy methods. 7. Composite materials. 8. Theories of van and Error References. 8. Non-destructive Inspection (Robert L. Crane and Jeremy S. Knopp) 1. Introduction 2. Liquid Penetrants. 3. Radiography. 4. Ultrasonic methods. 5. Magnetic particle method. 6. Thermal methods. 7. Eddy Current Methods. Appendix: Ultrasonic properties of common materials. References. 9. Mechanics of incompressible fluids (Egemen Ol Ogretim and Wade W. Huebsch). 1. Introduction. 2. Liquid properties 3. Fluid Statics 4. Ideal (Inviscid) Fluid Dynamics. 5. Viscous Fluid Dynamics. 6. Similitude and Dimensional Analysis. 7. Current in closed pipes 8. Power in Open Channels. 9. Flow over submerged objects. 10. Liquid measurements. References. Bibliography. 10. Aerodynamics of wings (Warren F. Phillips). 1. Introduction and notation. 2. Boundary layer concept. 3. Inviscid Aerodynamics. 4. Unpressurly current over airfoils. 5. Trailing-Edge Flaps and Section Flap Effectiveness. 6. Unpressurly flow over finite wings. 7. Flow over multiple lifting surfaces. 8. Wing Stall and Maximum lift coefficient. 9. Inviscid Compressible Aerodynamics. 10. Compressible Subsonic Current. 11. Supersonic Current. References. 11. Steady One-Dimensional Gas Dynamics (D. H. Daley with contributions from J.B. Wissler). 1. Generalized one-dimensional gas dynamics. 2. Simple flows. 3. Nozzle operating characteristics. 4. Normal shock waves. 5. Plane Oblique Shock Waves. 6. Conical shock waves. 7. Prandtl-Meyer Expansion. References. 12. Mathematical models of dynamic physical systems (K. Preston White, Jr.). 1. 2. Ideal elements. 3. System structure and interconnection laws. 4. Standard forms for linear models. 5. Approaches to linear system analysis. 6. State variable methods. 7. Simulation. 8. Model classifications. References. Bibliography. 13. Basic Control Systems Design (William J. Palm II). 1. Introduction. 2. Structure of the control system. 3. Transducers and error detectors. 4. Actuators. 5. Control laws. 6. Controller Hardware. 7. Further criteria for gain selection. 8. Compensation and alternative control structures. 9. Graphic design methods. 10. Principles of digital control. 11. Unique digital algorithms. 12. Hardware and software for digital control. 13. Software support for the design of the operating system. 14. Future trends in control systems. References. 14. Thermodynamics Fundamentals (Adrian Bejan). 1. Introduction. 2. First law of thermodynamics for closed systems. 3. Second law of thermodynamics for closed systems. 4. Energy minimum principle. 5. Laws of Thermodynamics for Open Systems. 6. Relationships between thermodynamic properties. 7. Analysis of engineering system components. References. 15. Heat Transfer Fundamentals (G. P. Peterson). 1. Conduction heat transfer. 2. Convection heat transfer. 3. Radiant heat transfer. 4. Boiling and condensation heat transfer. References. Bibliography. 16. Electric (Albert J. Rosa). 1. Introduction. 2. DC (DC) Circuits. 3. Linear active circuits. 4. AC Circuits. 5. Transient reaction Circuits. 6. Frequency response. References. 17. Electronics. 1. Bipolar Transistors (John D. Cressler). 2. Data Acquisition and Conversion (Kavita Nair, Chris Zillmer, Dennis Polla and Ramesh Harjani). 3. Data Analysis (Arbee L. P. Chen and Yi-Hung Wu). 4. Diodes (Konstantinos Misiakos). 5. Electronic components (Clarence W. de Silva). 6. Input Devices (George Grinstein and Marjan Trutschl). 7. Instruments (Halit Eren). 8. Integrated circuits (N. Ranganathan and Raju D. Venkataramana). 9. Microprocessors (Robert P. Colwell). 10. Oscilloscopes (Andrew Rusek) 11. Power Devices (Alex Q. Huang and Bo Zhang). References. Bibliography. 18. Light and radiation (M. Parker Givens). 1. Introduction. 2. Geometric optics. 3. Physical optics. 4. Light sources. 5. Lasers. 6. The eye and vision. 7. Detectors or optical transducers. References. Bibliography. 19. Acoustics (Jonathan Blotter, Scott Sommerfeldt and Kent L. Gee). 1. Introduction. 2. Sound power, sound intensity and sound pressure. 3. Decibel and other scales. 4. Weighting filters. 5. Impedance. 6. Theory of Sound. 7. Reflection, transmission and absorption. 8. Hearing loss. 9. Passive noise control. 10. Active noise control. 11. Architectural Acoustics. 12. Community and environmental noise. 13. Analysis of sound quality. 14. Non-linear acoustics. 15. Human ear and hearing. 16. Microphones and speakers. References. Further lectures suggested. 20. Chemistry (D. A. Kohl). 1. Atomic structure and periodic table. 2. Molecular structure and chemical bonding. 3. Chemical reactions and stoichiometry. 4. Chemical thermodynamics. 5. Thermochemistry. 6. Chemical balance. 7. Phase equilibria. 8. Chemical reaction rates. 9. Electrochemistry. 10. Organic Chemistry References. Bibliography. 21. Engineering Economy (Kate D. Abel). 1. Introduction. 2. Cash flows and time value of money. 3. Equivalence. 4. Single Sum and Uniform, Gradient and Geometric Series 5. Compare alternatives: Define options. 6. Compare alternatives by figures of merit. 7. Additional analyses in the selection process. 8. Capital recovery, capital costs and replacement studies. 9. Conclusion. References. 22. Sources of material data (J. G. Kaufman). 1. Introduction and scope. 2. Intended applications for data. 3. Types of data. 4. Data source topics. 5. Quality and reliability of data. 6. Platforms: Types of data sources. 7. Specific data sources. References. Index. Index.
